Description			
<p>up to now inVRs has no own namespace.</p> <p>So the default namespace will fill up more and more and it become more and more difficult to track, which features are part of inVRs and which aren't.</p> <p>The idea is to introduce namespaces in inVRs.</p> <p>the question is whether only one namespace (inVRs) or a hierarchy of namespaces (e.g. inVRs/SystemCore,...) should be created.</p> <p>The other thing is how to accomplish backward compatibility</p>
